

The Online Bookshop – REST API

Java 21 · Spring Boot 3 (Spring Web MVC) · PostgreSQL · Redis – stateless, bearer-token authenticated

📁 /api

└─ 📁 /auth

- └─ **POST** /register # Create account - full name validated, returns tokens
- └─ **POST** /login # Email & password sign-in, returns tokens
- └─ **POST** /refresh # Rotate the refresh token, returns a new pair
- └─ **GET** /me # Current user profile 🔒

└─ 📁 /books

Public catalog - no token required

- └─ **GET** / # List books - page, size, search, sort, direction
- └─ **GET** /{id} # Single book

└─ 📁 /cart

🔒

- └─ **GET** / # Current cart with line and grand totals

└─ └─ 📁 /items

- └─ **POST** / # Add a book - validates available stock
- └─ **PUT** /{bookId} # Change quantity
- └─ **DELETE** /{bookId} # Remove from cart

└─ 📁 /orders

🔒

- └─ **POST** / # Checkout - mock payment, row-locked stock
- └─ **GET** / # Order history, newest first
- └─ **GET** /{id} # Single order
- └─ **DELETE** /{id} # Cancel within 24h - restores stock, keeps history

└─ 📁 /health

- └─ **GET** / # Liveness probe, also the keep-warm target

AUTHORIZATION SERVER ENDPOINTS (SAME APPLICATION)

📁 /oauth2

Self-hosted authorization server

- └─ **GET** /authorize # Authorization Code + PKCE entry point
- └─ **POST** /token # Authorization code exchanged for tokens
- └─ **GET** /jwks # Public keys that verify access tokens

📁 /.well-known

- └─ **GET** /oauth-authorization-server # Discovery document
